

# Fuels Treatment Overview

## Recommended Treatment Area MK001 NOE and MK003

### Miller Knox Regional Shoreline

Background: In 2010, the East Bay Regional Park District's Board of Directors approved the *Wildfire Hazard Reduction and Resource Management Plan* ("Plan") and the accompanying CEQA (California Environmental Quality Act) document which covers hill and shoreline parklands from Richmond to Castro Valley within the Measure CC (Measure FF) funded area. The approved Plan is an integral component of the Park District's Safe and Healthy Forests initiative for wildfire protection. This project includes Recommended Treatment Areas (RTA) MK001 and MK003 of the Plan, as well as a FEMA Notice of Exemption Area.

Why: The purpose of this project is to establish a zone of natural habitat that is resistant to wildfires, more accessible for firefighters, and less fire-prone. Hazardous wildland vegetation will be reduced in the wildland-urban interface. Trees and other vegetation will be thinned out or removed throughout the project on Park District property. Healthy native oak and bay trees will be preserved where feasible. Some of the logs and branches will be chipped onsite, some will be completely removed, and some material will be left in piles to be burned during the rainy season. The work is prescribed by FEMA and fully permitted by State and Federal environmental regulatory agencies. Homeowners should continue to clear vegetation on their own property and take appropriate measures to protect their homes against wildfire.

Who: The Park District's Fire Department is managing the project. Various crews and contractors will be performing the initial work and ongoing maintenance. Contractors may be using heavy equipment and chippers. The Park District's Stewardship Department and consulting biologists will be closely monitoring to ensure appropriate resource protection. The Park District's survey department may be surveying and marking some of the property boundaries to help us make sure we perform work on District lands.

When: The Park District's Diablo Fuels Crew worked from January through May 2022 clearing small dead and diseased trees and brush, and staging the material for disposal by the upcoming contract. A tree contractor is expected to begin large tree and brush removal in mid-July 2022 extending through mid-August. The Park District and its contractors will minimize the impact to park users by restricting work hours to weekdays (7:30 am to 5:30

pm) and temporarily redirecting trail use, if necessary. Equipment and crews will be operating during the project.

Additional

Information: More information about the Park District's Wildfire Hazard Reduction and Resource Management Plan and specific maps and reports can be found at:
